## Welcome To ProMed Molded Products, Inc. A Company Committed to Excellence

ProMed has been specializing in the molding of small, intricately designed silicone components and sub-assemblies since 1989. By combining state of the art equipment and tooling, we are able to produce small, tightly toleranced parts to the most exacting specifications.

Transfer, liquid injection, RTV and micro-molding are just a few of the processes that we perform on a daily basis.

Our goal is simple; to provide our customers with quality molded parts, shipped on time at a competitive price. From one piece to one million pieces, ProMed is able to satisfy the most demanding molded part requirements.

### Molding Experience... Extensive Capabilities

ProMed offers complete in-house production, prototype and technical services

- Design, tooling, molding and assembly
- Transfer, liquid injection, insert and compression molding capabilities.
- Prototype through production volumes
- Expansive role in value added and sub-assemblies
- Multiple manufacturing sights; Minnesota & Puerto Rico
- Micro-molding and Bio-Material plastics
- Certified Class 10,000 (ISO7) clean room environment.
- FDA Registered Facility

ProMed produces tightly toleranced silicone components and sub-assemblies to meet the industry's highest standards of quality, workmanship, and repeatability.

## Engineering it Right and Getting it Done Quickly

Our Technical Center, with equipment paralleling that found in our production area, enables us to initially manufacture your small quantity prototype requirements, then proceed efficiently through the development and production phases. Customers have come to rely on our manufacturing and engineering expertise to help create components and assemblies that meet both performance and cost expectations.

- Engineering design assistance
- Cost effective component pricing
- Molding with and without inserts
- Assembly operations and ample room for expansion
- Supply chain management

**Committed to Quality and Customer Satisfaction.**

ProMed is committed to providing quality molded components. Our environment is one of heightened awareness and our employees understand the need for strict adherence to quality assurance measures in each part we produce.

Our dock to stock, JIT, and Kanban programs are in compliance with ISO standards. ProMed's new product development (NPD) program places major emphasis on producing robust processes and quality controls. NPD activities can be custom tailored or refined to meet your needs.

ProMed's story isn't one that's full of bells and whistles...but it is one that is worth telling. We invite you to take a look at us. To hear our story, compare our quality, and put our service to the test.
